Michael Cunningham,
Commercial Director,
Airfree (Amancorp Ltd)

22nd June, 2009

Dear Michael,

I confirm that, after a successful trial of Airfree technology at our Al Aweer facilities, we are delighted to exceed the minimum purchase agreement set out before we began and install Airfree units throughout our Al Aweer facility and in 10 chiller units at our main produce storage facility in Ajman.

I note that mould levels before Airfree units were installed in the subject commercial chiller unit at Al Aweer were a maximum of 273 cfu, and dropped over the 5 week trial period with Airfree in operation to a minimum of 36 cfu, equating to a decrease of 86.8%.

The subject chiller was in constant use throughout the trial period and no special concessions to our ordinary commercial operations were made.

Airfree has shown itself to be a profitable investment for our fresh food business, and shown proven increased shelf life for both Kibsons and our clients' benefit, where the increased freshness of our products can only re-enforce our reputation for excellence in the market.

Yours sincerely,

Daniel Cabral, Procurement Manager

Kibsons International LLC
